Software Developer	May '21 - Present
Robosoft Technologies Pvt Ltd	Udupi, KA
Software Developer	Nov '19 - Apr '21
Medici Technologies Pvt Ltd	Manipal, KA
Software Developer	May '18 - Jul '19
Samplersoft Solutions Pvt Ltd	Bengaluru, KA

PROJECT HANDLED

Ikroya - Election News WebApp

- Successfully delivered a user-friendly and responsive news platform catering specifically to election-related content.
- Implemented a seamless user experience by creating a feature-rich page with pagination, dynamic content display, a video player, and social media embeds. Additionally, introduced a highly efficient search feature with debounce, optimizing for SEO.
- Executed SEO strategies for enhanced visibility and user engagement, contributing to the project's success.
- Here we used Next.JS, Typescript, Tailwind, firebase, next-auth, etc

Cornerstone OnDemand

- Successfully modernized the user interface (UI) of the platform, Implemented code optimizations and performance enhancements, resulting in improved loading times and responsiveness.
- Actively participated in agile development methodologies, including daily stand-ups and sprint planning, fostering effective communication and seamless project coordination with cross-functional teams.
- Received positive feedback for the UI revamp, contributing to enhanced user satisfaction and engagement.

Aurum Liv

- It's one of the leading Real Estate Platforms in India which provides all multiple services at a one-stop platform.
- Developed the web app from scratch using React.js and used other front-end libraries.
- Link: https://www.aurumliv.com/

Stanza Living

- Developed web-based module is to use the housekeeping manpower in the most optimized manner which will effectively help the central and grounds team with better visibility and power to optimize the cost.
- Link: https://www.stanzaliving.com/

Aftool Web App

- Aftool is a responsive web-based application that allows brands or businesses to create campaigns for their products. Its a one platform to manage their social media campaigns. Here we used HTML, CSS, JavaScript, React.js, Reactstrap and etc for developing this responsive web app.
- Link: https://aftool.aflog.in/

Aflog Web App

- Aflog is a responsive web-based application for social media influencers, Here Influencers can see ongoing campaigns and can apply for it if eligible. Here we used HTML, CSS, JavaScript, React.js, MaterialUI. Google sign In for developing this responsive web app.
- Link: https://aflog.in/

SAZNow Ambassador(B2B) and SAZNow B2C Application

- SAZNow Ambassador Application developed for Garages, this application enables to generate vehicle heath report (a complete vehicle inspection including electronic faults), here we read the health state of the car using On-Board Diagnostics using OBD2. And the heath report of that vehicle automatically sent to user email.
- SAZNow B2C Application developed for the end user, they can book vehicle service or heath checkup with nearby SAZNow dealer/garage. And this app enables to track vehicle service status and its heath report.
- These two app developed using Android, Java, and used RazorPay, google signIn, google location service(GPS). and etc.
- B2B App Link: https://play.google.com/store/apps/details?id=com.samplersoft.saz_b2b
- B2C App Link: https://play.google.com/store/apps/details?id=saznowb2c.samplersoft.com.customerapp

SAZNow Web Panel

- SAZNow web panel developed for garages and here they can manages their orders other stuff's. also it has admin panel for internal managing things.
- here for backend we used Firebase and node.js and for frontend we used HTML, CSS, and JavaScript.

AaptaMandi Mobile App and Web Panel

- AaptaMandi android application for developed for farmers, its a gateway between sellers(farmers) and buyers. formers can post their product and registered buyers can buy that product. and it support multiple languages as well.
- AaptaMandi Web panel for internal purpose like to add new products, and managing transactions etc.
- AaptaMandi mobile app is developed using Android, java and we panel developed using HTML, CSS, JavaScript and React.js and for backend we used node,js, express.js and MongoDB.
